

Sustainable Procurement Policy

Welcome to the Sustainable Procurement Policy developed by Quality & Logistic Industrial Services, s.r.o. This policy is designed to strengthen a responsible approach to purchasing decisions and contribute to more sustainable and environmentally friendly trade. The aim of this policy is also to integrate sustainability principles into our procurement process for materials and services to reduce environmental impacts and promote social responsibility. We care about the awareness of our partners and therefore this policy is communicated with each selection of a supplier and is also available on our company's website.

The Sustainable Procurement Policy is based on the strong values of environmental responsibility, social justice, and ethical trading. We aim to actively contribute to environmental protection, reduce negative impacts on society, and support sustainable economic growth. We also commit to complying with standards in accordance with the recommendations of Ecovadis, as one of the most recognized global companies providing ratings and methodologies for sustainability policies.

Within this policy, we will actively collaborate with our suppliers, support innovations towards sustainable materials and processes, and thoroughly evaluate the entire product lifecycle from manufacturing to disposal. We will also strive to minimize the ecological footprint of our supply chain and ensure that it complies with the highest sustainability standards.

We expect that this Sustainable Procurement Policy will not only reflect our values and commitments but also inspire our customers and partners to adopt similar sustainable practices. We believe that together we can achieve positive changes and contribute to a better future for our society and the environment.

Selecting Sustainable Suppliers

Selection Criteria: When evaluating potential suppliers, we will consider not only price competitiveness but also their commitment to sustainable practices. This includes compliance with ethical standards, certifications demonstrating sustainability, and efforts to minimize environmental impacts in their operations.

Supplier Audits: We will regularly conduct audits of our suppliers to verify their compliance with our sustainability criteria. This includes monitoring working conditions, environmental responsibility, and other relevant aspects.

Responsible Material Selection

Material Selection Principles: We will prioritize materials with a lower environmental impact, such as recyclable or renewable materials. We will prioritize certified materials that meet sustainable standards.

Hazardous Material Handling: When selecting materials, we will focus on minimizing or eliminating the use of hazardous substances, in accordance with applicable regulatory standards.

Waste Minimization

Responsible Procurement Process: When purchasing, we will prefer products with minimized packaging material and prioritize options for reuse or recycling.

Supplier Collaboration: We will actively collaborate with suppliers to find new ways to minimize waste in the supply chain and support initiatives to improve sustainability in packaging.

Supporting Local Suppliers

Local Sourcing: We prefer local suppliers and manufacturers to reduce our ecological footprint associated with transportation. This includes not only purchasing products but also using local services and contractors.

Local Economic Development: We strive to strengthen local economies by supporting and collaborating with local businesses and organizations. This may also include joint projects or participation in local community initiatives.
